## AudiOffice by invoxia: designed for iPhone 5

*\*At work or at home, call from your mobile line or from your phone apps on the AudiOffice and benefit from a rich, enveloping sound in a conference call and a clear sound with the comfortable handset. Get more out of your music listening thanks to its optimum acoustic qualities.*

## **AudiOffice by invoxia: designed for iPhone 5**

Following on immediately from the announcement from Apple, invoxia introduces AudiOffice the first smart dock designed to be compatible with the iPhone 5. This versatile dock with its sophisticated Cortex A8 processor optimizes IOS devices to such a level that it is an essential device for seamless daily communication and for listening to music. The dedicated removable back holder, gives the most suitable user experience and positions the iOS device at an ideal angle. People can connect and charge any devices such as a tablet, PC and iPhone 5 using USB connection and benefit from its amazing sound capabilities or using its automatic Bluetooth set up and seamless connectivity. All invoxia products are designed to accept iPhone 5 and any IOS devices as well as other Smartphones & tablets.

Following the success of the award winning invoxia Smart Office Phone which was recognized by the Consumer Electronics Show with the [Best of CES Innovations award 2012](#), [invoxia](#) is extending its product range by launching a brand new device, the **AudiOffice** which is adapted for all IOS devices including iPad and iPhone 5.

### **A desk top phone for daily communications**

Nowadays, IOS devices are increasingly used as the main telephony system in life. Easy internet access combined with accessible mobile phone tariffs are making Smartphones such as the iPhone the essential tools for communication for an increasingly large number of people. Applications such as Skype, FaceTime, Bria, Google talk or Viber are massively used for daily communications and so the AudiOffice was designed to optimize the user experience of the iPhone for the best quality communication whether you are using the handset or in conference call mode. With the AudiOffice there is no need to set up a separate phone line, just simply pair it with your iOS device via Bluetooth and you can receive and make calls straight away. Either select a number from your list of contacts or call from one of the many VOIP applications.

### **High quality sound for playing music**

An additional advantage of invoxia's revolutionary technology is that it enables users to listen to music or podcasts and enjoy the very high sound quality. With In Vivo Acoustics the separation between the left and right channels is very impressive, especially considering the relatively small size of the device. The sound coming from the speakers is hardly noticeable. It is possible to enjoy an immersive listening experience wherever the person is situated in the room because each instrument is spatially isolated and can be heard very distinctly.

## An all-in-one dock for making conference calls

The **AudiOffice's** ultra-innovative design enables professionals to participate in conference calls with an unparalleled quality of sound. Its In Vivo Acoustic technology, 4 wide-bandwidth speakers as well as **2 digital microphones** creates the sensation of a physical presence of the person when in conference mode. Invoxia has developed sophisticated algorithms which enables users to benefit from the full potential of **In Vivo Acoustic technology** with an inbuilt system which eliminates echoes and background noise in order to achieve high quality conference calls. Also thanks to its inbuilt 'sound spacialization' the sound is emitted from all directions which creates the sensation that the sound fills the room, not loudspeakers. It's as natural as if the real person or instrument was right there in the room. A key advantage of this technology is that hands free telephony becomes more enjoyable and comfortable because you're no longer talking to a machine. The person you are calling seems to be right next to you. Their voice is rich and clear, making the conversation more pleasant and improving the flow of exchange.

## Easy Connectivity

Connecting the AudiOffice to mobile devices is very easy because they are automatically paired via Bluetooth to all IOS devices therefore offering a unique seamless solution. Thanks to the dedicated removable holder, people can also connect and charge any devices such as a tablet, PC and iPhone 5 using USB connection. The holder is ergonomically designed to position the iPad or iPhone at an ideal angle for ease of use and to give a clear view of the screen when using any VOIP applications. The device will constantly be updated via the invoxia application and they will constantly be developing new services.

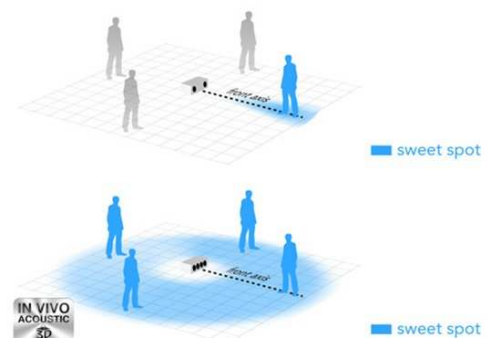

Serge Renouard, co-founder of invoxia: *"We are one of the first companies to offer a dock which is compatible with the iPhone 5. With this device we have identified a niche in the market by creating a music dock and phone in one which caters for people who use their iPhone and iPad as their main device for communication and leisure time. The AudiOffice is tailored towards specific needs which haven't been met by other devices, invoxia offers new technology to the telecoms industry which is designed to adapt to the ways in which people communicate."*

The **AudiOffice** with its slick design, made in partnership with Elium Studio, is an unparalleled device for daily communications and leisure time.
