

Press Release invoxia
Paris, July 11, 2018

Don't ever lose your valuables again! The Invoxia GPS tracker is now available in Europe on Sigfox!

This new generation GPS tracker uses low-power network Sigfox to locate people, belongings or vehicles at any time, wherever in Europe they may be, for up to 6 months.

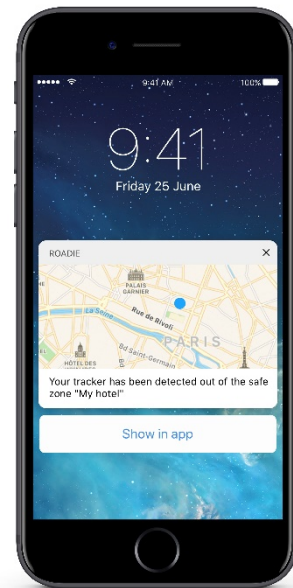

Paris, July 11, 2018 – Invoxia today announces the availability in Europe of its autonomous, simple and powerful geolocating GPS tracker that works with Sigfox low-power network. Covering most of the European countries¹, it keeps an eye on things and people we care about, for up to 6 months.

Summer holidays are just around the corner, which means most people will be travelling, switching countries, flying across the continent. While away, what if they could keep an eye on the motorcycle they left behind, on their kids to make sure they don't skip curfew, or their luggage while flying across the continent?

¹ For more information: <https://www.sigfox.com/en/coverage>

The Invoxia GPS Tracker is the next-generation device that keeps track on cars, motorcycles, luggage, even children, to make sure they never get lost again. Easy and discrete, the tracker fits anywhere: in the glove compartment, the top case, the pocket of any handbag, or the children backpack. With a battery life of up to 6 months, it allows users to access the exact location of the device on their smartphone with GPS precision, and trace its routes in a selected time slot. The user can also define “security zones” in order to receive alerts whenever the tracker enters or exits these areas. Imagine the possibilities for tracking a stolen car, motorcycle or simply a suitcase while travelling!

Serge Renouard, co-founder of Invoxia says *“Today, we’re making a technology that was pricey and limited to large logistics companies available for anyone, all over the European continent. People can travel and trace their routes, they can trace the luggage, find their car in the parking lot without wandering around for hours, they can know if their kids are home safely! They can finally all leave on holidays worry-free!”*.

High precision and autonomy

Unlike most existing trackers, the tracker does not use a SIM card, but uses low-power network Sigfox, which allows it to be more autonomous (with a battery life of up to 6 months) and more efficient than any other tracker. It also combines GPS and nearby Wi-Fi network locating technologies to offer the highest precision in every environment: city and countryside, inside and outside. The device is available with no additional cost: it includes a 3-year subscription to Sigfox.

Advanced Features

With a battery life of up to 6 months, it allows the user to access the tracker’s exact location on the smartphone, with GPS precision, and trace its routes in a selected area or time slot. Users can also customize the tracking intensity while the Invoxia GPS Tracker is in movement. Users can activate several modes according to their needs:

- **Everyday Mode:** In this mode, the user is notified every 10 minutes if the tracker is in movement
- **Intense Mode:** In this mode, the user is notified every 5 minutes if the tracker is in movement outside a specific geographic area.

Technical Features:

- Includes 3-year subscription to the Sigfox low-power network
- Optimal battery life, of up to six months
- Customizable tracking intensity: 5 minutes, 10 minutes.
- High-precision tracking, outdoors and indoors, thanks to the combined GPS and Wi-Fi network locating technologies
- Ultra-thin black aluminum case with leather cordon
- Micro-USB charging, cable provided

Availability:

The Invoxia GPS tracker is available in Europe at the price of 99,00 €, including a 3-year subscription to the Sigfox low power network. It can be purchased invoxia.com and Amazon.
